OUR HISTORY

HERMAN DONOVAN

Beginning of Lifelong Learning: Academic Donovan Fellowship

In the late 1950's, Dr. Herman Donovan, President of the University of Kentucky (UK), dreamt of enriching the lives of older persons. He proposed that colleges and universities open their doors to persons aged 65 and older, allowing them to register for courses free of cost so that they could continue to pursue their interests. He reasoned that colleges and universities owed their greatness to the work, support, gifts, taxes and votes of our older generations.

Twenty-six Donovan Scholars, ranging in age from 65 to 84, were admitted to UK in the fall of 1964, joining 18-year old counterparts for the first time. One of the first programs of its kind in the country, it was not long before the Donovan Program gained national attention. In 1966, TIME magazine dubbed the program "Educare", an obvious reference to Medicare which was in the news at the time. Whereas most of the early Donovan Scholars were from the Lexington area, the national publicity resulted in inquiries from every state and many foreign countries. *(pictured to the left: Donovan Scholar in classroom during 1960s)*

Educational and Enrichment Courses: For the Joy of Learning!

Courses offered in the community were added in 1966 for adults 60+. The Donovan Forum which began in 1970 offers a series of lectures, workshops and entertainment on a wide variety of topics presented by University professors, public and private organizational representatives, OLLI Members, etc.

Osher Lifelong Learning Institute (OLLI) at UK

In January 2007, UK received financial support from the Bernard Osher Foundation to increase learning opportunities in Lexington, allowing our offerings to widen in number and scope, and our membership by lowering the age to 50 and extending lifelong learning to other sites in Kentucky. The Osher Foundation continued their support financially to the University of Kentucky through additional grants, gifts and finally 2 endowments. A National Resource Center, created and funded by the Osher Foundation, supports a national network of 125 OLLIs located from Maine to Hawaii.

OLLI at UK offers courses, forums, seminars, day trips, shared interest groups and events throughout the year in a variety of topics, formats and locations.

Maximum Enrollment: 25 | Course Fee: \$30

Jacques-Louis David (1748-1825) died exactly 200 years ago, right when the Romantic era was flowering. But his new radical style was revolutionary in the 1780s and effectively replaced the Rococo, associated with the Ancien Régime. David's politics were equally radical--he was, in fact, allied with Robespierre and directed the various Revolutionary arts organizations. He designed Revolutionary pageants and glorified leaders like Jean-Paul Marat. After the Revolution, David the opportunist courted Napoleon, became his First Painter, and helped create the Empire style. We will follow David's training in the French Academy, which he eventually abolished, and his studies in Rome. In many ways, he became a sort of despot in the art world, and dominated the whole scene.

Both routes are difficult. Neither is safe. Still, they are routinely traveled by men, women and children bound for a new life. These are the travel stories for thousands of immigrants who raised the area’s non-native population from less than 300 to more than 73,000 between 1774 and 1792. We will discuss the routes settlers use, the conditions they encounter, and the risks they endure. Travelers’ journals from the period are heavily relied upon in this narrative, a perspective no history book offers.

In this course we will search for their original homeland, learning how they lived and what they believed. We will investigate the various branches of the Indo-European language family and sample several of the daughter languages. (no class October 7)*

10 – 12 Noon

*Course Location: Crestwood Christian Church,
Chalice Hall & Zoom*

Maximum Enrollment: 40 | Course Fee: \$30

The U.S.A. allows private parties to own mineral rights, allowing many of its citizens to benefit directly when oil and natural gas are produced from their lands. In addition, the energy supply chains that produce, process and deliver hydrocarbon fuels to end users employ more people on a permanent basis than comparable supply chains for certain types of renewable energy. Thus, how we elect to satisfy our energy needs affects both the number of people we employ and the nature of those jobs. On the other hand, the detrimental environmental effects of hydrocarbon fuels are well-documented and cannot be ignored. Our diverse energy needs can only be met using all currently available sources and technologies, as well as likely additional future ones. This class will provide an overview of the entire mix of energy sources and uses. It will address the economics of the energy industry and its environmental effects. There will be a discussion of how a network of civil laws and state and federal regulations promotes a balance between public interest and the rights of land and mineral rights owners. Finally, the wide reach of public and private sector energy research will be examined.

With that scene, de Waal starts to make the case for animal caring. From apes to zebras, he discovers that animals can detest and delight, love and leave, laugh at each other, console and mourn for themselves and members of other animal species. To many eighteenth century immigrants, "Kentucke" and its "great meadow" (the bluegrass) is akin to the promised land. Two major avenues lead there, the Ohio River and the Wilderness Road. Both routes are difficult. Neither is safe. Still, they are routinely traveled by men, women and children bound for a new life. These are the travel stories for thousands of immigrants who raised the area's non-native population from less than 300 to more than 73,000 between 1774 and 1792. We will discuss the routes settlers use, the conditions they encounter, and the risks they endure. Travelers' journals from the period are heavily relied upon in this narrative, a perspective no history book offers.

(no class October 7)*

10 – 12 Noon

*Course Location: Crestwood Christian Church,
Chalice Hall & Zoom*

Maximum Enrollment: 40 | Course Fee: \$30

The U.S.A. allows private parties to own mineral rights, allowing many of its citizens to benefit directly when oil and natural gas are produced from their lands. In addition, the energy supply chains that produce, process and deliver hydrocarbon fuels to end users employ more people on a permanent basis than comparable supply chains for certain types of renewable energy. Thus, how we elect to satisfy our energy needs affects both the number of people we employ and the nature of those jobs. On the other hand, the detrimental environmental effects of hydrocarbon fuels are well-documented and cannot be ignored. Our diverse energy needs can only be met using all currently available sources and technologies, as well as likely additional future ones. This class will provide an overview of the entire mix of energy sources and uses. It will address the economics of the energy industry and its environmental effects. There will be a discussion of how a network of civil laws and state and federal regulations promotes a balance between public interest and the rights of land and mineral rights owners. Finally, the wide reach of public and private sector energy research will be examined.
